"Golden Pixie Award"

3D painting tools

I've avoided 3D painting tools for years because they just were not good enough. Now they are.

The Golden Pixie Award for Awesome 3D Paint Tool goes to Ofer Alon for Pixologic's ZBrush.

Alon created this remarkably deep and sophisticated tool pretty much on his own. He is one of those geniuses who is both an artist and engineer.

The interface he has created is exceptionally well thought out and even includes a video tutorial window. ZBrush can do things no other Paint Program can, including 3D paintings with lighting effects and all sorts of remarkable tools, textures and brushes. You can sculpt tools in real-time 3D using sliders!

The masking tools can mask both color and geometry manipulations. A demo is available. I highly recommend you get it and take the time to learn its depths.
